FLOOD ADVISORY REPORT

Prepared for the National Disaster Response Force (NDRF) and the District Disaster Management Authority

Report JN-HARPUR-202610160112 | Generated 16 Oct 2026, 06:42 IST | Source: JalNetra flood intelligence

Harpur, Gopalganj

CRITICAL RISK

Flood probability 89% | Water reaches the village: about 5 h | Confidence: Low

Coordinates 26.6099 N, 84.3990 E | Recommended action: Evacuate now

Data basis: Replay of the September 2026 Gandak flood at 27 Sept 2026, 17:30 IST

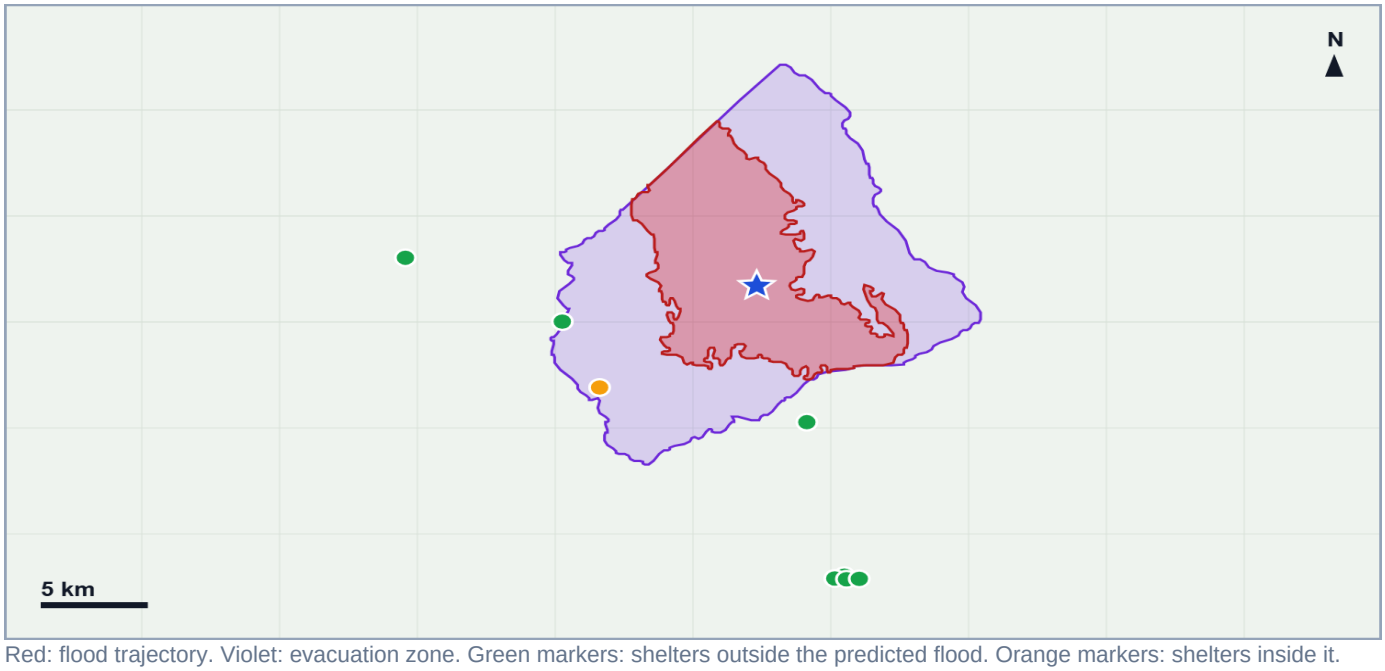

1. Flood forecast and affected area

Selected planning horizon: +12 h. The flood trajectory is the extra land the river covers beyond its normal channel; the evacuation zone is the region to keep empty (the flood now and at the next forecast step, with a safety margin).

Time	Flood trajectory (km2)	Evacuation zone (km2)	People in zone	Phones in zone
Now	0	7.5	6,358	3,815
+3 h	1.9	39.4	33,398	20,039
+6 h	17.8	118.7	1,00,618	60,371
+12 h (selected)	93.4	245.9	2,08,442	1,25,065
+24 h	219.5	245.9	2,08,442	1,25,065

People: WorldPop 2020 (live API). Phones = people x 0.6 (assumption). For horizons other than the selected one, people are scaled from the selected zone's density.

2. Map of the affected area

Red: flood trajectory. Violet: evacuation zone. Green markers: shelters outside the predicted flood. Orange markers: shelters inside it. Blue star: the village.

3. Affected villages inside the evacuation zone (10)

Village	Risk level	Flood probability	Water arrives
Birwat Kundaulia	CRITICAL	70%	now
Narayanpur	HIGH	33%	~5 h

Village	Risk level	Flood probability	Water arrives
Rajman	HIGH	31%	~6 h
Jolaha	MEDIUM	28%	~10 h
Rampur Tengrahi	MEDIUM	25%	~12 h
Dih Bharauwa	MEDIUM	18%	~24 h
Panditwa Diara	LOW	16%	~31 h
Jagdishpur	LOW	11%	not in 48 h
Bhagwanpur	LOW	11%	not in 48 h
Narayanpur	LOW	10%	not in 48 h

4. Nearest shelters

Shelter	Type	Distance	Flood status (+24 h)
Government Hospital, Awadh Nagar Bishnupur	Hospital	8.1 km	Outside predicted flood
Government Hospital ,Nechua Jalalpur	Hospital	9.3 km	Outside predicted flood
Government Hospital Kuchaikote	Hospital	9.3 km	Inside predicted flood
Prem Chandra Public School	College	16.5 km	Outside predicted flood
DR. M. Kumar Medical Dental Institute And Hospital	Hospital	16.9 km	Outside predicted flood
Biprasi Hospital	Hospital	17.0 km	Outside predicted flood
Government Hospital, Gopalganj	Hospital	17.1 km	Outside predicted flood
Sadar Hospital, Gopalganj	Hospital	17.3 km	Outside predicted flood

Shelters are the nearest mapped schools, colleges and hospitals (OpenStreetMap). They are not confirmed relief camps; capacity and access must be verified.

5. Evacuation route

Destination	**K.R. High School**
Distance	**24.8 km (11.4 km on mapped roads)**
Travel time	**146 min by car, 508 min on foot**
Flood exposure	**No fully dry route: least-exposed route, leave before the water arrives**

6. Estimated rescue and relief requirement (planning estimate)

People in evacuation zone	**~2,08,442**
People inside the flood	**~79,172**
Needing assisted rescue	**~7,917 (10% of those inside the flood)**
Rescue boats	**50 (1 boat per 160 people over the window)**
NDRF rescue teams	**13 (about 390 personnel; 4 boats per team of 30)**
Relief camps	**167 (for ~83,377 people, 40% of the zone, 500 per camp)**
Medical teams	**21 (1 per 10,000 people)**

These figures follow from the assumptions in brackets and are a starting point for the response commander, not a deployment order.

7. Local alert status

No alert has been approved for this village yet.

8. Why this village is at risk

Factor	Detail	Points
Flood probability	89% within 24 h	40/45
Time to impact	Now	15/15

Factor	Detail	Points
Low ground	Lowest ground nearby -1.9 m above the channel	10/10
Near the river	0.5 km from the main channel	9/10
River rising	Dumariaghat: +9% in 6 h	6/10
Rain	159 mm in 48 h (Nepal catchment)	10/10

Risk score 90 of 100.

9. Method, data and limits

River discharge forecast (GloFAS via Open-Meteo, 7 Gandak stations) is turned into a flood probability per 200 m cell with a model fitted to Sentinel-1 radar flood maps (height above channel from Copernicus DEM, JRC normal water). Only water connected to the river is kept. Population comes from WorldPop (100 m).

Limits: the model says whether water reaches a place, not how deep. Embankments and canals are not modelled. Cells are about 200 m. It was fitted to one event (September 2026). Phone counts are estimates, not device locations. Use alongside gauge readings and local reports.
